

Release Notes

BlueSpice 1.0.1

BlueSpice 1.0.1 is a patch release.

Changes since BlueSpice Core 1.0 / BlueSpice for MediaWiki 1.0

Main changes

- MediaWiki 1.17 is now supported
- BlueSpice works with public wikis (no read restriction for anonymous users)
- RSS feeds now have token authentication (you can use them with Outlook even when read access is generally restricted)
- Added PageTemplates option to enforce a given target namespace
- Review works with flagged revs
- Removed version specific “common” folder in bluespice-skin

BlueSpice Core

- Fixed bug when saving configuration in MW1.17
- Removed “BlueSpice” from mouseover texts in ExtendedSearch form
- Fixed bug in output handler where standard AJAX calls would not pass when not logged in
- Added installcheck script
- Added method to check if curl is activated in ExtendedSearch
- Restored fulltext search option in IE8
- OutputHandler is now compatible to load.php (ResourceHandler)
- Various i18n fixes

BlueSpice for MediaWiki

- Overall code cleanup
- Various i18n fixes
- WantedArticle: added a comma to the queue
- ResponsibleEditors: changed format of namespace settings
- Statistics: added DejaVu font and made jpgraph use it.
- UniversalExport: added debugformat option. Use URL param debugformat=html in order to generate HTML output

- InsertFile: now uses MySQL stored procedures
- PageTemplates: “force default namespace” feature
- Adapter: modified remote handler to get secure files on extension whitelist to show on pages in \$wgWhitelistRead even for anonymous users.
- Review: consider flagged revs
- RSSFeeder: fixed bug with display of namespaces
- PageTemplates: PageTemplatesAdmin now works in IE
- WantedArticle: fixed i18n
- InsertFile: fixed upload in IE8
- InsertCategory: fixed JS error
- Adapter: MW 1.16+ compatibility for public wikis
- PermissionManager: fixed SQL statement
- InsertFile: fixed file name sanitation
- InsertFile: file extensions now case insensitive
- WantedArticle: hitting enter is now the same as clicking add (suggested before)
- Preferences: fixed bug where allowed file types for upload would not have any effect
- Preferences: fixed multiselect add function in MW1.17
- PermissionManager: Adapter/config/pm-settings.php is now generated automatically (so as to keep existing settings intact)
- PageTemplates: fixed bug where for pages in namespaces the namespace would show up double
- Emoticons: emoticons with : and ; now work with MW1.17
- RSSFeeder: now works with token authentication
- Authors: fixed profile images in MW 1.16.x +
- WantedArticle: removed page link in ajax response, as we don't have ExtJS messagebox on the clientside available
- PagesVisited: fixed “duplicate entries after page move”
- InsertFile: fixed error message after file upload
- SaferEdit: fixed JavaScript-error when moving a page

BlueSpice Skin

- Proper embedding of SkinTemplateToolboxEnd standard output into the TOOLBOX Widget
- Support for resource loader (conditional for MW1.17)
- Fixed “AllPages” link not being translated in MW 1.15.x
- Shortened wpSummary field
- Fixed SemanticForms ui-class overwrite (tabs in left navigation)
- Removed version specific “common” folder

The Team

Programmers

- Markus Glaser
- Radovan Kubani
- Sebastian Ulbricht
- Marc Reymann
- Mathias Scheer
- Thomas Lorenz
- Tobias Weichert
- Robert Vogel
- Erwin Forster
- Karl Waldmannstetter
- Daniel Lynge
- Tobias Davids

Design & Testing

- Anja Ebersbach
- Richard Heigl
- Nathalie Köpff
- Michael Rödl
- Michael Scherm
- Dardan Diugan
- Christina Glaser
- Patric Wirth

Standing on the shoulders of giants

We would like to thank all the people around MediaWiki. You've created a wonderful piece of software. Thanks a lot!
